Subject: FCC Part 15 Results

Fellas-
The testing went quick & easy with no hitches or complications.

From this week's Engineering Report:

- FCC Part 15 testing performed and passed.

NOTE: It can't be overstated how much this is a testament to skillful and competent design practices by the entire hardware development team, including Keith Hamilton, our contract PCB designer. This relatively large and complex design with multiple clocks (RFI sources) passed the FCC test with no shielding of any kind required.

THANKS!

Raytheon
